# Field Warrior®

The app for your mobile workforce.

Field service automation on Android and approved Garmin devices. Field Warrior® does real-time GPS tracking, electronic logbooks, digital DVIRs, dispatching, navigation, and more.

Real-time GPS Tracking

Field Warrior® captures your drivers' vehicle location and activity information, and transmits the data to our servers for you to monitor in real-time.

Certified ELD

Field Warrior® is an FMCSA-approved and compliant electronic logging device (ELD) that makes maintaining compliant driver logs easier than ever.

Commercial Navigation

Turn-by-turn commercial navigation keeps your drivers only on roads suitable for their vehicles (size, weight, hazardous materials, etc.).

Driver ID & Behavior

Events like speeding, excessive idling, and harsh braking/accelerating are tracked and paired with each driver's unique ID. Then all the information is displayed in the IntelliHub® Driver Scorecard to help you identify bad driving behavior.

Dispatched Stops

Drivers receive scheduled stops along with all relevant details within the app. When a stop is selected, Field Warrior® guides them with turn-by-turn navigation and keeps you informed with real-time status updates.

Custom Digital Forms

Go paperless by utilizing custom digital forms for proof-of-delivery, driver inspections, and more for real-time automated reports and audits.

Timecard Verification

Identify when and where your employees clock-in and out. You'll have an accurate depiction of the hours your employees are working, while eliminating paperwork and costly mistakes.

2-Way Messaging

Improve your communication process with quick 2-way messaging that automatically stores all conversations for future reference.

Signature & Image Capture

With Field Warrior®, your drivers can include customer signatures on digital forms, and capture photos with their phone or tablet – yet another way of connecting dispatchers to the field.
